

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings which are used on lift masts so as to help them function within challenging environmental surroundings. Lift masts are often subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences like heat, dust, cold, moisture, contamination and aggressive ambient air. Thus, the lift masts' guidance arrangements should be particularly robust and have a specific high load carrying capability.

To be able to help compete in a lot of different environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
