

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is an apparatus constructed out of top quality materials designed to be able to endure the most challenging operations and work environments. This piece of equipment enables the individual driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the entire load or the arms in order to facilitate more precise carrying and placement in a quicker and much more effective way.

The fork pocket is somewhat unique and could enable the person operating it to safely sway the forks into position without any fear of damaging the positioning cylinders. This could allow the driver the alternative to be able to perform simultaneous or independent fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on available units.
